

# EnduroShield

Up to 90% Less Cleaning

## KITCHENS:

### ENDUROSHIELD® PROTECTION

EnduroShield® is a permanent non-stick, protective coating for use on glass, tiles and grout and stainless steel surfaces in commercial and residential kitchens. Using state of the art nanotechnology, EnduroShield acts as a permanent shield to seal the porosity of the surface, allowing contaminants to reside on an easy to clean, non-stick protective coating. The invisible coating, just two molecules thick, prevents contaminants from soaking into the surface protecting against staining and etching. The superior protection reduces the build up of mould, grease and grime and harmful bacteria, helping to promote a germ free environment. EnduroShield is non-toxic, safe to use near food preparation areas and can withstand heat of up to 300 degrees Celsius, making it an ideal solution for kitchen and dining surfaces.

### APPLICATION

EnduroShield® is ideal for use on glass, tiles, grout, porcelain and stainless steel surfaces. The once only application makes grease, grime and fingerprints easier to clean by up to 90%.

### HOW TO APPLY

EnduroShield® can be applied in factory to the glass, tiles or stainless steel before installation or in situ by certified applicators. The product is a clear liquid that is sprayed on, and polished into the surface, creating a permanent bond. Application comes complete with a 10 year warranty when applied to new glass, or 3 years when applied to existing glass, tiles, grout and stainless steel surfaces.

### FEATURES & BENEFITS

**Once only application: permanently bonds to the surface**  
EnduroShield® is not a traditional coating that sits on the surface, but chemically bonds, becoming a permanent extension of the surface.

**Protects against corrosion and etching from contaminants**  
Untreated surfaces are porous and as a result, absorb contaminants and pollution which cause deterioration and discolouration. The deterioration of the surface makes cleaning more frequent and more difficult. EnduroShield® seals the porosity of the surface helping prevent the deterioration caused by etching and corrosion. As a result the time and frequency of cleaning is reduced.

**Fingerprint are easier to remove**  
EnduroShield® creates a protective barrier which ensures marks and stains sit on top of the protective coating. Fingerprints along with other marks are easier to remove.

**Maintenance costs are significantly reduced**  
EnduroShield® creates a permanent non-stick coating which greatly reduces the time spent cleaning. It also limits the need for harsh chemicals and assists in reducing the build up of mould and harmful bacteria further reducing maintenance costs.

### SPECIFICATION

EnduroShield® continues to be specified by leading architects for application on both residential and commercial developments to protect surfaces and reduce maintenance time for clients.

I'm a fulltime nurse and love cooking for my family.

I first used EnduroShield™ on my kitchen windows and behind the stove and sink. When I discovered that the long grotty cleaning jobs that I used to hate had become quick and easy I put it in my bathroom on the tiles and glass.

Thanks to EnduroShield™ I now have more time to do the things I want.
